Boley struck Dr. Mills, who was just recovering from an attack of pneumonia, over the head with a club while two of Boley's daughter's were holding the object of their father's rage. The coroner's jury, which held an inquest on Mills, returned the following verdict, and it is likely that the matter will be investigated further by the grand jury: "We, the jury, empaneled to inquire the cause of the death of Dr. J. M. Mills, find from the evidence that deceased came to his death from natural causes, and that death of said Mills was hastened as a result of overexertion and injuries received while in a difficulty with one Wm. Boley and daughters."

### Sugar Beets in Missouri.

The agricultural college of the university with the assistance of farmers in the state have been for several years conducting experiments with sugar beets to determine whether the industry would be profitable. The conclusions are that Missouri is unfavorable for this industry as is shown by the following extract from the official report:

"A general study of the results obtained leads to the inevitable conclusion that Missouri is not very favorably situated for producing beets of the highest quality. It is possible to secure in some instances results which are exceptionally favorable, but that such results could be secured continuously and from season to season is not probable. The data show that the whole of the state of Missouri belongs in the same category, in respect to growing rich sugar beets, as the southern part of the states of Ohio, Indiana and Illinois. Even the northern counties of Missouri are too far south to give the best results. It is evident, however, in so far as yield is concerned, that Missouri is probably the equal of any state in the union for growing beets of fine size and large tonnage per acre. Unless exceptional conditions, favorable to manufacture, are found in the state, it is not probable that the sugar beet industry will gain a foothold for sometime in competition with the more favorable localities farther north and east."

"Do you use lead in making your biscuits, Mrs. Hashleigh?" asked the new boarder. "Yes," said the landlady, sweetly, "have you any suggestions to make?" "Well, you might use aluminum; it's lighter."
